Subject: Re: Start of Memo to Reviewers of Breastmilk methods and consultation
Date: 03/28/2008 04:37 PM

Sven responded to me that I can leave my table in the document that will be backed by ATSDR. I think I will calculate PCB dose to infant based on the measured milk levels in the table, and compare those doses with the LOAELs from the monkey studies. Maybe I'll even just add a column to the table for the estimated dose to the infant. That will be a spring-board to talk about the prenatal effects and how the health benefits of breast feeding always outweigh the risks. It actually may not be that different without the direct comparison to numbers generated by the model. I'll just switch the order of the human levels and animal levels. I also think I'm going to elaborate the table a little bit more.

Attached is a rough draft of a letter to be included with the two documents when we send them out for review. I almost exclusively focused on the methodology document because it isn't clear to me what the health consult will look like after yesterday's call with ATSDR in Atlanta. Also, Dave, I wasn't sure what specific issues you might want to have the reviewers focus on.

(See attached file: 20080328 Letter to Reviewers.doc)

(b) (6) . I
should be in mid morning on Friday (b) (6)
(b) (6) . If you want me to review anything, send it to
my home e-mail at:

(b) (6)

Call me to let me know that you sent it using my cell number:

(b) (6)

See ya!
